OUR COMPANY

Interceramic has been an industry leader in manufacturing innovative ceramic and porcelain tile in North and Central America for over 40 years. The Interceramic brand was founded in Mexico, and has been crafted to become one of the strongest and most well known brands in Central America. In 1994 Interceramic entered the United States market, further cementing global recognition as a leading manufacturer of quality products, with unparalleled service.

At the core of Interceramic's values is the unwavering commitment to innovation. Since its inception, Interceramic has strived to design and create groundbreaking products while maintaining unmatched quality and production standards. The strong decades-long partnerships with European technology, raw material, and design partners ensure that Interceramic will remain at the cutting edge of the industry.

As one of the largest manufacturers in North and Central America, Interceramic is proud to have established 10 manufacturing facilities with production capacity in excess of 450 million square feet annually, with over 4,500 employees world-wide.

Additionally, Interceramic is committed to service the North and Central American customer and has established an extensive distribution system in the United States that includes 13 company owned showrooms, 3 distribution centers and 53 independent distributors throughout the US and Canada, as well as over 300 retail locations throughout Mexico, Asia and Central America.

Interceramic's dedication to manufacturing and distributing innovative ceramic and porcelain tile, accents, and natural stone will continue to make affordable luxury floor coverings available to an ever growing market.

Interceramic. Crafted for Life.

1979 Interceramic opens the doors of its first headquarters in Chihuahua, Mexico, with an expansion into a new office in the 1980's.

1993 Interceramic begins construction on a wall tile factory and US corporate headquarters in Garland, TX.

2017 Interceramic opens its newest headquarters in Carrollton, TX.

2020 Interceramic continues to lead the industry in the manufacturing of innovative ceramic and porcelain tile.

DURABODY® CERAMIC

STRONGEST TILE IN THE INDUSTRY

**TWICE THE STRENGTH.
HALF THE MAINTENANCE.
ALL THE BEAUTY.**

**THE CERAMIC
THAT THINKS
IT'S PORCELAIN.**

OUT-PERFORMING COMPETITORS

Crafted for Effect

LUMEN

Interceramic First elevated the design of ceramic tile by introducing digital print technology, allowing designs to mimic the most realistic looks in natural products, like stone, marble and wood.

Interceramic now brings digitally printed tiles a step closer to reality with LumenFX. This special process replicates the infinite beauty found in nature by adding distinct and specific highlights to each individual tile. The unique ink creates depth to your space by adding the right touch of reflectivity to the tile's design.

Get the beauty of nature and the durability of tile with LumenFX from Interceramic.

Interceramic Digital Technology

Pairing digital printing technology with the production of tile allows Interceramic to create designs that mimic the most realistic looks in natural products, like stone, marble and wood, just to name a few. While digital printing technology has become very common in the tile industry, not all designs are equal.

What is digital print technology? Digital printing allows Interceramic to scan pieces of actual marble, stone or wood, to be used as the foundation for beautiful design. Hundreds of pieces can be scanned, allowing for the final look to replicate the infinite beauty found in nature. The individual pieces create a unique "face", forming a unique color and design spectrum from one tile to another. A single design can range from having a few unique faces, to have many unique faces, resulting in very little repetition overall. The design is digitally printed on the tile during the production process. When printing at maximum resolution, digital technology creates a cleaner and sharper image than any other type of printing techniques.

Interceramic was the first manufacturer in North America to offer tile using digital print technology. By forging long-standing relationships with the leaders in digital print equipment, Interceramic is able to acquire state-of-the-art technology. Also, as one of the few manufacturers in North America that prints at the highest resolution, Interceramic captures the true variation found within natural products, and the level of realism in design will confuse even the most noted tile experts.

DIGITAL
TECHNOLOGY**

Interceramic Green

Interceramic Green Squared Certified

With Green Squared, eco-friendly product specification is now more efficient & consistent.

In accordance with our commitment to maintain a harmonious relationship with the environment, Interceramic embraces even superior standards for our products by becoming Green Squared Certified.

Today, all of Interceramic manufacturing facilities in Mexico and the U.S. are included in a Third Party Audit process then reassures architects and designers that our products meet the industry's green standards. Choosing Interceramic products for sustainable projects is simple, just look for the Green Squared logo.

Green Squared (ANSI A138.1) is the industry standard for sustainable tile & tile installation products. This new all-encompassing multi-attribute standard covers environmental product characteristics, responsible product manufacturing, packaging and raw material extraction, end of product life management, progressive corporate governance, and innovation.

By seeking out Green Squared Certified products, specifiers can put together total sustainable installation systems.

Green Squared Facts

- Green Squared encompasses a full range of products within an industry and made a standard for sustainable choices more identifiable.
- These products have met unique ecological criteria in several different facets of production in order to become Green Squared.
- The Green Squared logo can be recognized in several different categories of the tile industry, certifying many aspects of installation.

OUR SIGNATURE+ COLLECTION OFFERS SIX STUNNING COLLECTIONS IN DURABODY® CERAMIC AND DURATEC™ PORCELAIN

Interceramic continues to change the landscape of the tile industry. You now have choices that no other tile manufacturer is offering. With the introduction of the **SIGNATURE+ COLLECTION**, we offer six popular designs in both Durabody® Ceramic tile and Duratec™ Porcelain tile. What does that mean for you? You can offer high design, at an affordable price, to cost conscious customers with Durabody® Ceramic tile. Plus, satisfy discerning customers that prefer Duratec™ Porcelain tile. **Same Design. Same Performance. Your Choice.**

Interceramic. Crafted for Life.

PERCEPTION IS NOT REALITY

RAW MATERIALS

White Body - comprised of specific raw materials, including feldspar, and ground to finer grain, resulting in the lowest moisture absorption.

Red Body - comprised of highest quality ceramic raw materials, sourced and controlled in Interceramic owned mines, resulting in lower water absorption than other ceramics.

PORCELAIN GLAZES

Porcelain Glazes create a superior finish that can withstand the toughest circumstances. Our Durabody® Ceramic tiles are produced using porcelain quality glazes, and fired at the same temperature as porcelain, creating a higher resistance to stains, scratches and wear.

DURABILITY

White Body - the combination of specific raw materials in a finer grain often creates a denser body, resulting in superior breaking strength of ±450 lbf.

Red Body - a proprietary process combining quality raw materials pressed at a higher density, creating a ceramic with a stronger breaking strength of ± 400 lbf.

DESIGN

The design is exactly the same. Same graphics, same digital printing and LumenFX inks! Once installed, you'll never tell them apart!

All tiles meet or exceed ASTM standards for chemical resistance (ASTM C650), crazing resistance (ASTM C424), and thermal shock (ASTM C484) unless otherwise noted.
NOTE: Due to the inherent nature of fired ceramic tile, it is important to note that the coefficient of friction may vary within and between product runs

GLAZED CERAMIC

Glazed ceramic tile has been used for centuries and offers consumers more options in color, texture, pattern and overall beauty than most other floor covering materials. With new manufacturing techniques, today's ceramic tile designs are virtually indistinguishable from natural marbles, travertine, slates and other stone products. Ceramic tile is simply a mixture of clays which have been shaped and fired at high temperatures, resulting in a hard body. Characterized by a dark red or white back with a fine glaze over the body of tile, the non-porous glaze creates a surface that is virtually stain proof and very low in maintenance.

DURABODY CERAMIC

Durabody ceramic tiles are made to last a lifetime, while looking like the day they were installed. That's a lifetime of muddy paws, stomping children, cold snaps and everything else life can throw at it. The Durabody secret? Our tiles are fired at the same temperature and glazed just like porcelain. That means you get virtually the same frost resistance, water resistance and durability as porcelain at a fraction of the cost. And with designs to match your taste, Durabody tiles will make any space beautiful—inside or out.

PORCELAIN

Porcelain tiles are usually frost resistant and manufactured using clays (including kaolin and feldspar) that have specific properties. The extremely high firing temperatures result in a tile that is stain- and scratch-resistant and harder than granite. Dense and impervious by definition – with a water absorption rate of 0.5% or less – porcelain tile is produced with either glazed or unglazed surfaces. Unglazed porcelains are usually "through-body" with regard to color, while glazed porcelains are most often glazed over white- or buff-body material. While unglazed porcelains often have higher slip resistance than glazed porcelains, they can also be more difficult to clean than the glazed variety. It is important to take this into account when choosing between different porcelain tiles. There are also many non-porcelain tiles that can be used in environments with extreme freeze/thaw cycles and that are manufactured with properties similar to porcelain.

GLAZED COLORED-BODY PORCELAIN

Glazed colored-body porcelain is one of the most recent innovations, combining the best qualities of glazed tiles (reduced maintenance issues, increased color and design selection) with those of unglazed tiles (body color that more closely approximates the glazed surface color), making it exceptionally versatile, durable and resistant to wear.

INSTALLATION AND REFERENCE MATERIALS

Installation procedures recommended are those indicated in the current Handbook for Ceramic Tile Installation as published by the Tile Council of America, Inc. Specification references recommended are those established in the American National Standard Specifications for the installation of ceramic tile, as published by the Tile Council of America, Inc. Due consideration must be taken with regard to the subsurface, intended use of the tile surface, and exposure to foreign substances such as water, oil, acid, etc., when selecting the type of setting material and grout. If in doubt, the manufacturer of these setting materials should be consulted.

SHADE VARIATIONS

Variations in shade and color are inherent in all fired clay products. This natural quality contributes to the overall visual characteristic of ceramic tile and should be expected. Blending of tiles from at least six different cartons during installation is recommended, as shine/finish can differ under certain lighting conditions.

LIMITS OF LIABILITY

Tests are performed on random samples of Interceramic tile by an independent testing laboratory and are believed to be representative of the general quality of the tile. There is no guarantee by Interceramic that these exact results will be guaranteed on every tile. Interceramic extends no guarantees, expressed or implied, as to slip resistance, wear-time period, gloss or maintenance procedures. Test procedures and individual results are available from Interceramic.

ANSI A-137.1

Interceramic tile achieves the necessary values for the ANSI A-137.1-P188 (American National Standards Institute) requirement. This is the most complete testing done on ceramic tile and includes tests on thickness, facial dimension, warpage, edging, water absorption, crazing, thermal shock, bonding strength and breaking strength.

WARRANTY AND PRODUCT USE INFORMATION

Published test results for InterCeramic tile are not guarantees of product performance. All products are subject to variations in coefficient of friction and other technical specifications due to inherent variables in the production process. Test results on all products may vary slightly from tile to tile, and from test to test. Skid-resistant tiles are more difficult to clean; additional effort is necessary to assure contaminants are removed promptly. Since stone is a natural product, it is not possible that every color and marking present in one piece will be present in another. Many glazed ceramic tile products can also vary in shade, color and finish due to the inherent differences in the manufacturing process that can occur over time and from lot to lot. In order to insure that our products meet your individual job requirements, please inspect all stone pieces and tiles prior to installation to determine acceptability. This method will identify any blending or culling necessary. No claims with respect to shade, color or finish, whether in natural stone or glazed ceramic tile products, will be allowed after installation. Unless otherwise stated, InterCeramic floor and wall tile is recommended for interior applications only, and is not recommended for use on ceilings or roofs. Check local building codes prior to specification or installation to verify that the technical characteristics of specified InterCeramic tile are compatible with all requirements. Printed color samples are for reference only and may not be an exact product match. Contact your InterCeramic representative for actual product samples prior to selection, and if you have any questions about InterCeramic tile.

In the absence of a demonstrated, post-installation product defect, use constitutes acceptance.

NOTICE OF WARRANTY

InterCeramic guarantees to the original purchaser only that, for a period of one year after the date of purchase, InterCeramic will replace any of its manufactured products that are proven to be defective. In order for this warranty to be valid, the following guidelines must be met:

1. The original purchaser must notify InterCeramic or an authorized representative in writing within 30 days of the occurrence of any defect.
2. After notification, InterCeramic or an authorized representative will inspect and/or test the product for defect and complete a Product Claim form. No claim will be honored without product inspection by InterCeramic or an authorized representative.
3. Upon determination that product defect claim is valid, InterCeramic will notify the purchaser in writing. In connection with any valid claim, InterCeramic reserves the right to either repair, replace or refund the purchase price of the originally purchased product.

EXCLUSION OF IMPLIED WARRANTIES AND OTHER WARRANTIES

THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE EXCLUDED FROM THIS TRANSACTION AND SHALL NOT APPLY TO THE GOODS SOLD. ADDITIONALLY, ALL OTHER WARRANTIES BEYOND THOSE EXPRESSLY PROVIDED BY THIS DOCUMENT OR REQUIRED BY LAW ARE EXCLUDED.

GLAZED FLOOR TILE

Routine maintenance of glazed and unglazed floor tile consists of simply sweeping and damp mopping with clean water and a mild solution of neutral cleaner formulated for glazed tile. Areas exposed to heavy traffic can be cleaned with solution of a heavy-duty neutral cleaner formulated for glazed tile and may also require scrubbing, depending on the texture of the surface.

It is very important to change the mop water frequently -approximately every 100-500 square feet- depending on how soiled the surface is. Please contact your sales representative for recommendations on the type of cleaner best suited for your application.

UNGLAZED FLOOR TILE

Unglazed mosaic, porcelain or quarry floor tile should be maintained by dust sweeping and damp mopping with clean water and a mild solution of neutral cleaner formulated for tile. Areas exposed to heavy traffic can be cleaned with a solution of a heavy-duty neutral cleaner formulated for tile and may also require scrubbing, depending the texture of the surface.

As an unglazed quarry tile floor ages, a patina forms on the surface which gives it a soft shine and keeps the floor looking fresh longer.

GLAZED WALL TILE

Routine maintenance of glazed wall tile usually consists of simply wiping with a damp cloth or sponge. The use of a neutral cleaner formulated for glazed tile is acceptable as long as any residue is removed with a clean water rinse. Countertop applications will require more frequent cleaning in this same manner depending on the exposure to grease, foods, acids, etc. Sealing grout joints on countertops is always recommended to prevent staining. Shower applications will require more periodic cleaning in order to remove soap scum, body oils and hard water deposit buildup. Normally, shower areas may be cleaned by spraying a mild solution of neutral cleaner formulated for glazed tile, letting it stand for three to five minutes, and then rinsing. If the tiled area has been neglected for an extended period of time, a solution of a heavy-duty neutral cleaner formulated for glazed tile is recommended for cleaning.

SEALERS

Refer to the manufacturer's recommendations before sealing unglazed mosaics, porcelain and quarry tile. There is no need to seal glazed ceramic tile. However, sealing the grout joints is recommended unless an epoxy grout is used. Please contact your sales representative for recommendations on the type of grout sealer best suited for your installation.

GLASS WALL TILE

For maintenance and cleaning, it is recommended to use a soft, clean cloth with warm water or with a non-abrasive cleaner formulated for use with glass. Do not use any cleaners with abrasive agent as these could scratch the tile surface. Glass tile should not be installed in floor applications because it can fracture when exposed to extreme weights and is very susceptible to scratching.

NATURAL STONE COLLECTIONS

HISTORICAL VIEWPOINT

Natural stone was formed and developed as a result of millions of years of geological changes that took place in the earth's crust. Thousands of varieties exist in numerous vibrant colors with many different characteristics. Experts believe there are hundreds of stones which are yet to be discovered. It is estimated that approximately 7000+ different types of stone exist in the world and 700 types available in the U.S. market today. Out of these, only 200 stones account for 80% of total wholesale sales. Because natural stones are quarried from the earth's crust they are products of nature. Each piece of natural stone is unique in its own way.

Another common term for natural stone is "dimensional stone". Natural Stones existed even before man appeared on the face of this planet and are found in many regions of the world including Mexico, U.S., Canada, Spain, Italy, Brazil, Portugal, Russia, India, China, Taiwan, Egypt, Peru and other countries too numerous to mention. Generally, only those natural stones that can be quarried economically are used. Some natural stones are too brittle, while some are too hard or simply cannot be extracted from the earth safely and economically. Ultimately the cost of some stones is a direct function of the difficulty of quarrying and processing the material and not necessarily a function of its physical beauty and performance characteristics. Basically, the natural stone qualities and characteristics differ by geological areas rather than geographical areas.

During the quarrying process, large blocks of stone are cut from various places in the earth's crust, primarily from mountainous regions and transported to processing factories. The processing factories cut the raw blocks of material using gang saws with multiple diamond-tipped blades to produce slabs of varying thickness. The slabs are generally face polished or honed on one side, depending on the desired finish required. The slabs may then be cut into strips of desired widths and lengths producing tile, depending on the desired finished product.

SELECTION OF MATERIALS

Millions of years in the making, natural stone is a beautiful, one-of-a-kind piece of artwork formed in nature. No two pieces are exactly alike. Variations in color, shading, particle size, veining and patterns are normal and to be expected making natural stone so unique. It simply cannot be duplicated by man. Just as humans have characteristics and markings that make each one of us unique, natural stone also has "character marks" that sets one particular piece of stone apart from the others. These character marks are not flaws.

The Marble Institute of America's position is that there exists no such thing as a "bad Stone". There exist however, inappropriate selections for a given application, and also unrealistic expectations of a given stone type in a specific application. Selections of natural stone types are available to satisfy all users, but the proper research must be completed to assure that the selected stone will perform in service with the desired behavior. Should you find the markings in a piece undesirable for a particular application, discuss it with your installer. Although your installer may be able to work around a particular piece, it is not guaranteed and it may be best for you to select another stone.

When purchasing natural stone tiles, be sure to purchase extra. Should you need to replace a tile in the future, it is highly unlikely that you'll be able to match your original tiles. Current material could possibly be taken from a different part of the quarry where the color and movement may have changed or perhaps come from a different quarry than your original tile. It is also possible that the look of the material in the quarry changes to a degree that a particular stone is deemed "no longer available". Plan ahead and order extra tile.

In this section, “characteristics of natural stone”, we provide to you a basic understanding of natural stone.

POROSITY While there are many variables between different types of stone, there are some common characteristics. The most important common fact is that ALL stone is porous. Sedimentary is more porous than metamorphic, which, in turn is more porous than igneous; but all are porous to some degree.

COLOR VARIATION The very essence of natural stone offers a realistic feeling and proximity to nature. Natural stone gives the classic look and beauty of endless variation. Each stone is unique in its own way. The variation of grain structure and veining formations differ from stone to stone. Granites mostly show very little variation in color, but may show variations in pattern and grain density. On the other hand, marble shows wide variations in color and veining formations. Likewise, travertine is fairly consistent in colors with hints of graining individuality. One must embrace and understand the concept of variation, since no two pieces are exactly alike.

Listed below are the most common finishes found in natural stone

FINISHES **Polished**
High glossy surface acquired through the use of diamond abrasive technology. Diamond abrasive technology over the past 20 years has dramatically increased the ease of polishing stone and facilitated higher standards of quality finishes.

Honed
Smooth, matte finish obtained with the use of diamond abrasive technology. This finish in natural stone is generally considered to be a 600 grit scratch pattern on the abrasive scale. It does possess angular reflectivity and is best for low maintenance and heavy traffic applications.

Natural Cleft
A finish unique to slates that has an uneven surface, yet is usable for flooring. This finish is created in the quarrying process through splitting or breaking the stone along its layers. One face (the backside) is generally gauged smooth with the use of diamond abrasive technology to facilitate leveled flooring.

Tumbled
An old world, weathered look given to tile by tumbling in a drum with a solution of water, sand and mild acid. Pieces of stone in a ¾” thickness are usually tumbled and then sliced down the middle, producing two pieces. Larger size tiles are given a “tumbled” finish manually. Tumbled material is not designed to be measured in exact dimensions, but offered in rustic nominal sizes within acceptable limits.

Brushed
A finish that is achieved through the use of steel brushes under the polishing wheels, achieving a slightly textured surface similar to the look of leather.

Split-Face
This finish is an uneven surface mainly achieved through man-made splitting technique. Its look resembles the natural cleft finish and is mainly used for wall cladding.

Edge Finishes or Profiles
There are various edge like, chiseled (chipped), pillowed, bullnosed, beveled, chamfered, etc.

AFFORDABILITY Natural stone offers an elegant, luxurious appearance and has recently shed the image of being affordable to only the elite and is emerging as an affordable finish to the average customer.

Natural Stone Disclaimer

The purchaser acknowledges that natural stones such as Travertine, Marble, Slate, Limestone and Granite are products of nature and have been quarried from all over the world. As natural products, they are prone to variations in color, texture, shade and veining that will differ from the samples shown. Dramatic variations in natural products are not considered flaws of natural stone but may occur as a result of the type of stone being used, as well as the current quarry conditions. No two pieces of natural stone are exactly alike and it is pertinent that the tiles are blended before they are set.

Always request samples of present stock as variations in material may occur without notice. It is the customer's responsibility to inspect the material before installation. Interceramic does not warranty natural stone products for shade coloration, size/ thickness variation, clefting, nor surface finish variation. Also, natural stone tiles are susceptible to cracking and pitting. Absolutely no claim will be accepted for any reason after the material has been installed.

New Installation

Sealing is highly recommended on newly installed natural stones. Select a high quality sealer to provide maximum surface stain protection. All Interceramic Tile and Stone Galleries carry a complete line of care and maintenance products. Contact your local Interceramic Sales Representative for the appropriate product for your stone installation.

Pre-Grout Sealing

Pre-sealing natural stone prior to grouting can make the grouting application much easier and will help protect all natural stone surfaces from grout pigment staining during the installation and grouting process. All Interceramic Tile and Stone Galleries carry a complete line of care and maintenance products. Contact your local Interceramic Sales Representative for the appropriate product for your stone installation.

Sealing

Once the grout has properly cured it is recommended to seal the stone with a high quality penetrating sealer. Generally, stone sealers are designed to penetrate the stone leaving a no-sheen, natural look and provide protection from liquids that would otherwise absorb into and possibly stain the stone. Various maintenance products are available to enhance and highlight the character and beauty of the stone while sealing at the same time. All Interceramic Tile and Stone Galleries carry a complete line of care and maintenance products. Contact your local Interceramic Sales Representative for the appropriate product for your stone installation.

Regular Stone Care

Interior natural stone floors should be frequently cleaned using a non-treated dry dust mop to remove dirt and dust that may scratch the surface of the stone. Mopping with a stone cleaner is recommended for routine cleaning. It is important to use a stone cleaner that is specifically designed for your particular stone. Never use vinegar or cleaners containing acid or bleach. All Interceramic Tile and Stone Galleries carry a complete line of care and maintenance products. Contact your local Interceramic Sales Representative for the appropriate product for your stone installation.

Maintenance Products

Interceramic does not manufacture products for stone installation, stone cleaning or maintenance products. The information contained herein is intended as a general information source only. It is always recommended to test a small area before using any stone sealer, cleaner, or maintenance product. It is also recommended to follow the manufacturer's instructions and wear the appropriate protective clothing to provide a safe installation.

Do:

- Dust mop floors frequently
- Clean surfaces with mild detergent or stone soap
- Thoroughly rinse and dry the surface after washing
- Blot up spills immediately
- Protect floor surfaces with non-slip mats or area rugs and countertop surfaces with coasters, trivets or placemats

Don't:

- Use vinegar, lemon juice or other cleaners containing acids on marble, limestone, travertine or onyx surfaces
- Use cleaners that contain acid such as bathroom cleaners
- Use abrasive cleaners such as dry cleansers or soft cleansers
- Mix bleach and ammonia; this combination creates a toxic and lethal gas
- Ever mix chemicals together unless directions specifically instruct you to do so

TILE PATTERNS & INDEX

IMPORTANT CONSIDERATIONS:

The tile pattern layouts contained in this catalog are presented as a means for inspiration. The suggested sizes and calculations are accurate, however the installer and/or end user accepts responsibility for determining final pattern calculations and usage prior to installation of the tile.

- Due to the nature of the manufacturing of ceramic tile, the size of each tile may vary from one tile to the next depending on when they were produced.
 - If using a single size in any installation, be sure the caliber of the tile is the same for all the material. This will ensure all of the tile was taken from the same production.
- When choosing a pattern with multiple sizes, calibers should be carefully selected based on the tile sizes used on each job.
- Multiple caliber sizes may need to be used to insure a proper width grout joint.
- If series is indicated as a modular or rectified product, calibers are not an issue.
- When installing products larger than 16" in an offset pattern, the offset must not be greater than 33%.
- Always layout the pattern to ensure its usability and obtain approval from the customer prior to installation.
- A proper width of a grout joint but be selected for any installation, please refer to guidelines set forth by Tile Counsel of North America.

Grout Recommendations per ANSI A108.02

4.3.8 Grout joint size: To accommodate the range in facial dimensions of the tile supplied for a specific project, the actual grout joint may, of necessity, vary from the grout joint size specified. The actual grout joint size shall be at least three times the actual variation of facial dimensions of the tile supplied.

Example: for tile having a total variation of 1/6 inch in facial dimensions, a minimum of 3/16 inch grout joint shall be used. Nominal centerline of all joints shall be straight with due allowances for hand-molded or rustic tiles. In no circumstance shall the joint be less than 1/16 inch.

TILE PATTERNS

PLANK TILE GROUT JOINT RECOMMENDATIONS

Running Bond/Brick Joint Offset and Patterns (ANSI A108.1)

For running bond/brick joint patterns utilizing rectangular tiles (rectified or cut) where the side being offset is greater than 18" (nominal dimension), the running bond offset will be a maximum of 33% and grout joint width of at least 1/8".

Amazonia & Geologic Running Bond/Brick Joint Offset and Patterns (ANSI A108.1)

For running bond/brick joint patterns utilizing rectangular tiles (rectified or cut) where the side being offset is greater than 18" (nominal dimension), the running bond offset will be a maximum of 33% and grout joint width of at least 1/8". The maximum convexity is 0.6 mm

example pattern: 7 1/2"x47"
